

# Nokia 6120 Exchange Email Setup

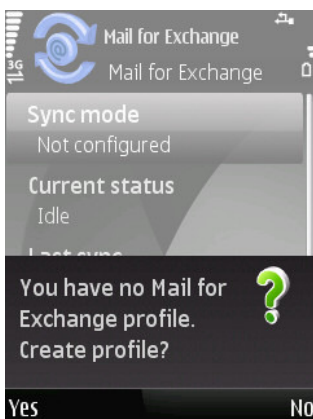

In preparation for configuring Email through your Company Exchange Server, you will need to acquire the **Exchange Server Address** and **Domain Name** from your IT department.

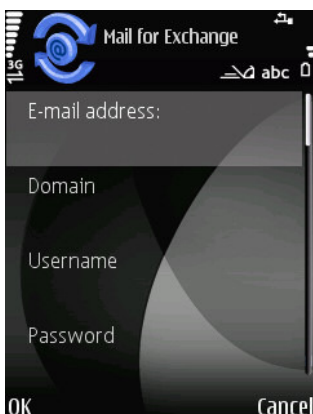

- From the Home Screen, scroll to the right and select **Web**

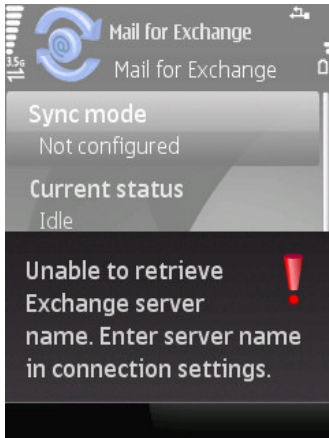

- Press **Options > Go to web address**
- Enter this website: <http://bit.ly/d847h7> (note: make sure to take out the "www.")
- Press **Go to**

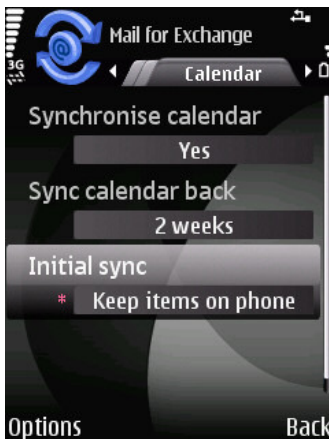

- Press **OK** or **Yes** on all notifications until Mail for Exchange has installed (you may experience short delays between notifications while it loads)
- Press **Yes** to create a new profile

- In this screen, enter your **Email Address, Domain, Username** and **Password**
- For the **Access Point**, select **TelecomData**
- Once complete, press **OK**

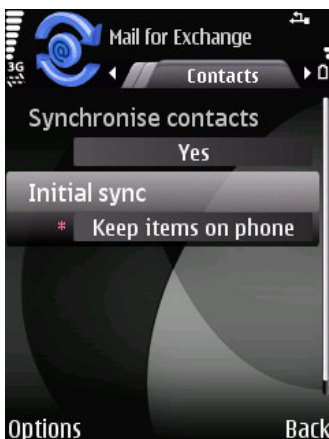

- It will attempt to get the **Exchange Server** name, but it will fail
- Press **OK** then enter your company **Exchange Server** name (eg. "webmail.company.co.nz")

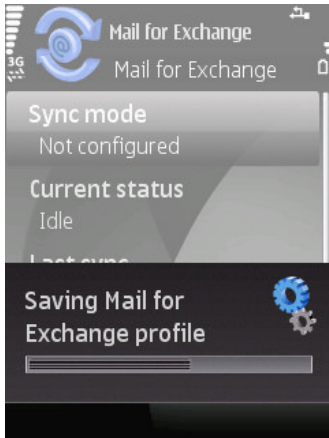

- Scroll to the Right until it shows the **Calendar**
- Change **Synchronise Calendar** to **Yes**
- Change **Initial Sync** to **Keep items on phone**

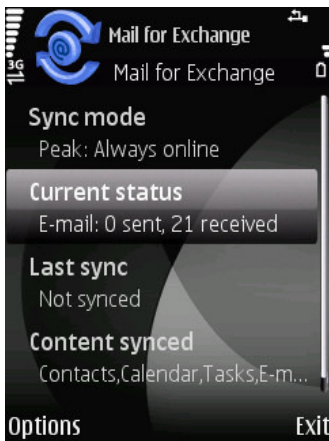

- Scroll to the Right again, and repeat above steps for **Tasks**

- Scroll to the Right again, and repeat above steps for **Contacts**

- Once that is done press **Options**, then **Save**

- Once you see progress, setup is complete and working and you may **Exit**
