### On Gen-i wins Westpac data-centre contract

The Westpac decision to move to Gen-i's tier 3 Data Centre in Airedale St was a win over IBM. Gen-i has a technically more advanced and more connected facility than IBM's place in East Tamaki. It is a major loss for IBM: now two mainframe customers have their primary production with Gen-i; Air NZ and Westpac.

### On NZ tech export sector revenue passes \$7 billion

... we have a surprisingly big and growing technology sector. Let's recognise this and the efforts of the people / companies that lead this. Well done. We need this growth and must learn how we can better contribute to the development of these established businesses and the new entrants in this sector.

### On A “properly mandated Chorus” and an “unleashed Telecom”

So what happens to the current Kiwi Share obligation? Every man for himself now?

– *Anonymous*

Champagne for all. That would explain why Paul Reynolds and several of his management team were supping Bollinger at Depot during lunch.

– *Anonymous*

Telecom is far from the first telco in the world to structurally separate.

It's also far from “the most regulated” telco in the world. New Zealand's telecommunications environment is relatively new and relatively light handed compared with almost every other regime in the world.

Just because Dr Reynolds says it doesn't mean it's true.
