# Be confident that you are ready to go live

Performance testing that ensures you can make critical decisions with confidence.

“An ounce of prevention is worth a pound of Cure.”

Benjamin Franklin

## The Performance Challenge

Without performance testing you run the risk of rolling out applications that can damage your business. Most businesses must:

1. Get a better return investment (ROI)
2. Reduce lost sales and customers
3. Ensure better performance, and response, not just more infrastructure
4. Remove bottlenecks before going live to avoid rework after “go-live”

Today’s market demands that information systems meet the highest possible performance standards. To ensure that business reaches its objectives, and meets the expectations of its diverse stakeholders, IT must be innovative in the delivery of cost effective high performance information systems.

## A stitch in time

Let us help you address these critical success factors:

- > Speed – does the system respond quickly enough
- > Capacity – is the infrastructure sized adequately
- > Scalability – can the system grow to handle future volumes
- > Stability – does the system behave well under load

## Invest now to save later

Without testing you run the risk of rolling out applications that damage your business.

Effective testing finds problems before they occur in your live business environment, thus safeguarding your reputation, profits, and staff satisfaction.

An early investment in testing identifies risks and reduces the potential for hidden costs, saving money downstream.

## Tangible business benefits

Early and comprehensive testing of products delivers tangible results.

- > Lowered total cost of new systems, with pragmatic test strategies and plans.
- > Improved customer and staff satisfaction by identifying quality issues before they impact reputation and buy-in.
- > Reduced schedule pressures by applying an ‘on-demand’ test capability that is flexible and professional.

## A flexible service to meet your performance testing needs

Are your business systems really 'fit for purpose'? Do they perform well and meet your business requirements? Will your customers be satisfied?

## A web site that does not perform well costs your business money and loses customers.

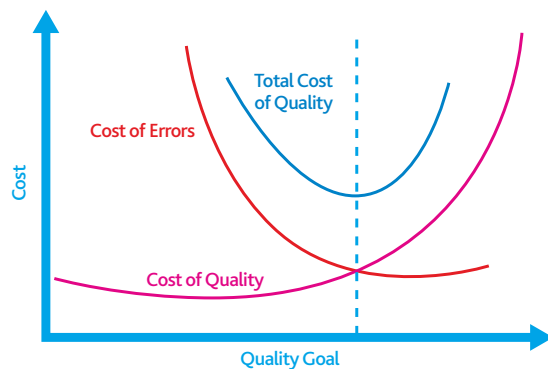

Gen-i understands that performance is key for companies that build high volume web sites and SOA applications.

Whether it is software, infrastructure, or networks, Gen-i's dedicated team has an in-depth understanding of performance testing. We have a wide variety of experience with various test tools and suites, and the right match of skills for your technology environment.

Our diverse team of experienced performance testing specialists live and breathe performance testing! They thrive on the challenge of complex problems and can deliver trusted results to tight time frames.

## Gen-i has the tools and expertise to find performance issues and solve them.

From test strategy to test script execution and defect tracking, we can provide the process and management for any test situation, while balancing the cost of quality and reduction in errors your organisation needs to achieve.

## Get Gen-i Performance Testing on your team

### TestPerformance

We help you solve your software performance issues. We implement the most appropriate test approach, and that is critical in today's business environment.

### TestPeople

Engage our knowledgeable and experienced test practitioners to help ensure that your project delivers.

### TestProject

Define, design, and implement a flexible testing solution using our resources, or allow us to mentor and train your staff to service your IT enterprise testing efforts.

### TestTool

Let our Test Engineers help select, install, and configure the testing tools used, together with the supporting infrastructure.

## Expert assistance when you need us
