Be confident your applications are ready before you go live

Software testing that ensures you can make critical decisions with confidence.

“Quality is never an accident ... it represents the wise choice of many alternatives.”

William A. Foster

Maximize Your Return on Investment

Today's market demands that information systems deliver the highest possible value. To support the business in reaching its objectives, IT development teams must deliver effective systems that achieve high levels of both quality and function. This calls for a rich blend of expertise, innovation, and passion.

Covering all aspects of Testing and Quality Assurance, Gen-i offerings match current demands and issues in the market. This enables us to complement an organisation's existing capabilities, or provide additional guidance or expertise that may be needed.

To meet these business requirements, and the expectations of diverse stakeholders, successful system delivery depends more than ever on the thorough testing of the entire solution. The outcome of this approach includes projects which are delivered:

- > On time
- > To budget
- > To purpose
- > With confidence
- > With reduced risk

Invest now to save later

Without testing you run the risk of rolling out applications that damage your business. Effective testing finds problems before they occur in your live business environment, thus safeguarding your reputation, profits, and staff satisfaction.

An early investment in testing identifies risks and reduces the potential for hidden costs, saving money downstream.

Tangible business benefits

Early and comprehensive testing of products delivers tangible results.

- > Lowered total cost of new systems, with pragmatic test strategies and plans.
- > Improved customer and staff satisfaction by identifying quality issues before they impact reputation and buy-in.
- > Reduced schedule pressures by applying an 'on-demand' test capability that is flexible and professional.

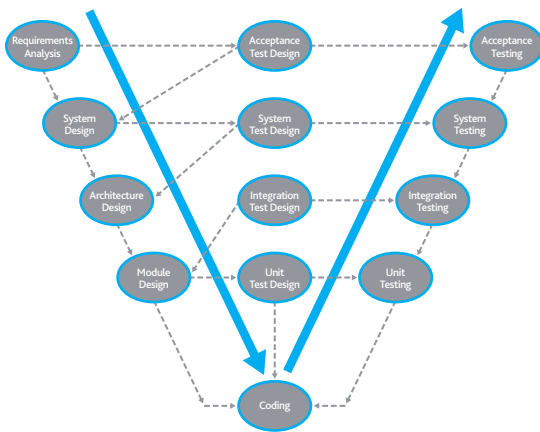

Gen-i Testing Services include:

TestPeople

Engage our knowledgeable and experienced test practitioners to help ensure that your project delivers.

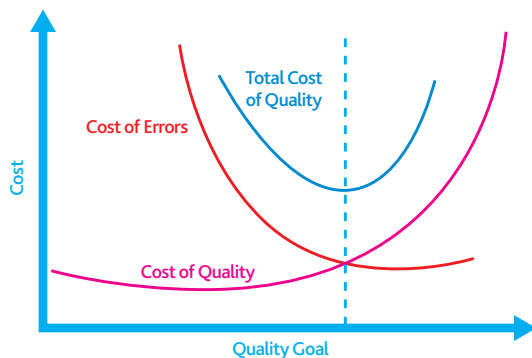

TestFramework

Understanding your testing needs is critical in today's business environment. Using best practices, tried and true methods, sound process and experience, we translate this into solutions that meet your IT testing requirements (e.g. the 'V' method).

TestProject

Define, design, and implement a flexible testing solution using our resources, or allow us to mentor and train your staff to service your IT enterprise testing efforts.

TestPerformance

We help you solve your software performance issues. We implement the most appropriate test approach, and that is critical in today's business environment.

TestTool

Let our Test Engineers help select, install, and configure the testing tools used, together with the supporting infrastructure.

TestSecurity

Security and privacy are critical success factors in today's Internet, Web and e-commerce driven business environments. We make sure that your systems, assets, and customers are not at risk, and that compliance is not an issue.

Get Gen-i-Test on your team

How we can help you

Test Strategy: Provide enterprise advice and assistance regarding your systems with expert knowledge and real world experience.

Test Planning: Determine the optimal test strategy and approach for your test projects.

Test Process Reviews: Whether a 'waterfall' or 'agile' approach, we will employ risk based and prioritised test management models.

Health Check Assessment: "Have we got the right approach in place?" Test focus is optimised to ensure project delivery is successful.

Test Tools: Engaging our experience with test tools, strategies, and evaluations will improve the delivery of your test objectives via the best approach.

Test Environments: Infrastructure, Defect, and Release Management.

Recruitment: We can provide experienced and qualified resources when required, or help you train or find your own resources.

Expert assistance when you need us
